

Assignment -1
HTML Form

Assignment Date	19 September 2022
Student Name	H.Juhaif Ahamed
Student Roll Number	820419104027
Maximum Marks	2 Marks

Question-1:

Create registration page in html with username, email and phone number and by using POST method display it in next html page.

App.py :

```
from flask import Flask, render_template, request, redirect, url_for, flash
from flask_wtf import FlaskForm

from wtforms import StringField, PasswordField, SubmitField
from wtforms.validators import DataRequired, Email, EqualTo

app = Flask( name ) app.config['SECRET_KEY'] = 'mysecretkey'

class RegistrationForm(FlaskForm):
    first_name = StringField('First Name', validators=[DataRequired()])
    last_name = StringField('Last Name', validators=[DataRequired()])
    email = StringField('Email', validators=[DataRequired(), Email()])
    phone = StringField('Phone', validators=[DataRequired()])
    password = PasswordField('Password', validators=[DataRequired()])
    submit = SubmitField('Submit')

@app.route('/', methods=['GET', 'POST'])
def index():
    return render_template('index.html')

@app.route('/register', methods=['GET', 'POST'])
def register():
    form = RegistrationForm()
    if form.validate_on_submit():
        flash(f'Account created for {form.first_name.data} {form.last_name.data}!', 'success')
        return render_template('success.html', form=form)
```

```

return render_template('success.html',
form=form) @app.route('/success',
methods=['GET', 'POST']) def success():
return render_template('success.html',
first_name=request.args.get('first_name'),
last_name=request.args.get('last_name'),
email=request.args.get('email'),
phone=request.args.get('phone'))

if name == ' main ':
app.run(debug=True)

```

Index.html:

```

<!DOCTYPE html>

<h1>Success</h1>

<h2>Thank you for submitting your information</h2>

<h3>Here is the information you submitted:</h3>

```
<p>
First Name: {{form.first_name}}
</p>
<p>
Last Name: {{form.last_name}}
</p>
<p>
Email: {{form.email}}
</p>
<p>
Phone: {{form.phone}}
</p>
</body>
</html>
```

Registration Page

First Name:	<input type="text" value="Aburva"/>
Last Name:	<input type="text" value="J"/>
Email:	<input type="text" value="abu@gmail.com"/>
Phone:	<input type="text" value="6354357623"/>
Password:	<input type="password" value="*****"/>
<input type="submit" value="Submit"/>	

Question 2:

Develop a flask program which should contain at least 5 packages used from pypi.org.

Program:

```
# Importing flask module in the project is mandatory
# An object of Flask class is our WSGI application.
from flask import Flask

# Flask constructor takes the name of
# current module (__name__) as argument.
app = Flask(__name__)
```

```
# The route() function of the Flask class is a decorator,  
# which tells the application which URL should call  
# the associated function.  
@app.route('/')  
# '/' URL is bound with hello_world() function.  
Def hello_world():  
    return 'HelloWorld'  
  
# main driver function  
if __name__ == '__main__':  
  
# run() method of Flask class runs the application  
# on the local development server.  
app.run()
```
